The Professional's Primer:- Easy to use, a rich-rounding water based priming lacquer, designed to be used in conjunction with other Floorcoat UK lacquers - specifically, SOLID, UNIK, ULTRAMATT and WHITE FINISH top coating lacquer products. It has incredible super fast drying time averages around 15 to 20 minutes. It's normal to be able to screen between coats if required, and apply a second coat or top coat within 10 to 20 minutes, dependant on the coverage and location temperature. To be applied to new or untreated wooden floors. Very easy to apply using a medium depth or sheep skin hair roller or wiper.

A truly Professional single component water based hard wearing Topcoat lacquer, suitable for high wear domestic houses. Complete is a lacquer that does not need a base coat, this makes it suitable for the DIYer or Professional who has a difficult job that must dry quickly in a domestic location. It is available in two finishes 15 and 30 (matt and silk). Dry times vary but in the right conditions, 15 to 30 minutes maximum between finishing coats, fully dry in just 1 to 2 hours, very forgiving – apply with medium pile roller - Ideal for the DIY specialist who wants a professional job without all the extra work.

For the Professional a very high quality flooring lacquer, but with a superior drying time of 20 to 40 minutes between coats, and full hardness after approx 1 to 2 hrs, this Extra strong water based poly-urethane topcoat -lacquer has a multilayer technology that does away with the need for added second components, giving greater flexibility to use what you need when you want without the waste element and complexity of getting it wrong. A super quick drying time makes it great in those time orientated jobs. To be applied directly to Basic's primer for use in very heavy traffic areas, including shops and offices. Available in finishes 15, 30, and 40 (Matt, silk, and silk gloss)

Only for the Professional – a slower drying but superior surface finish and look. Extra heavy duty strong water based poly-urethane multi-component top-lacquer (multilayer technology without the problems of having to mix two components) to get the same hardness and Chemical resistance which gives a superior finish surface with superior chemical resistance. For heavy duty domestic and commercial locations, for very high wear resistance, slower drying than Solid 2-4 hours full 97% hardness after approx 2-4 hrs.

Only for the Professional - Ultra matt gloss 5 an extra strong water based polyurethane top-lacquer, which gives the floor a superior finish and oil look - ultra matt is a unique finish with high resistance to chemicals and wear resistance that you only get with a lacquer, but with the natural look that only oil can give you. Slightly longer drying times 2 hrs after first coat 90% hard after approx 2-4 hours (Only available in 5 ultra-matt)
Should only be applied with short pile roller and must have Basic primer coat applied before hand. Must never be applied directly to the surface and streaking is possible – for those wanting an oil look with a superior hard wearing surface “you can only get from a lacquer finish”.

A Professional lacquer that gives a white oiled look to the floor but with the heavy protection you can only get with a lacquer finish. It's a heavy particulate water based white pigmented polyurethane top-lacquer, again using multilayer construction for fast but superior hard surface finishes, this product gives the floor a bright and contemporary /modern look. It has great flow ability, very high abrasion resistance, and good chemical and water resistance. Ideal for design offices/ lounges/hallways any high traffic area. Should be applied using a medium or short hair roller, dependant of the whitening look you want to achieve.
